

Assignment 2

1] Which field of the Customers table is the primary key?

=> Primary key is the key which uniquely identifies each row in a table. Since, Primary is unique and not null. Cnum column in customer table is primary key.

2] What is the 4th column of the Customers table?

=> 4th column of customers table is Rating.

3] What is another word for row? For column?

=> another word for row are: tuple, opportunity, entity

another word for column: attribute, key, method

4] Why isn't it possible to see the first five rows of a table?

=> It is not possible to see the "first five rows" of a table without specifying an order because tables in a relational database are, by default, an unordered set. of rows. You need to use an ORDER BY clause on a specific column to sort the data before you can retrieve the top five rows using a clause like LIMIT or TOP. Without sorting, the database is free to return the rows in any order that is most efficient for it.
