

### Assignment 3

1) Does ANSI recognize the data type DATE?

⇒ Yes, the American National Standards Institute (ANSI) recognizes the DATE data type as part of its standard for the Structured Query Language (SQL). The standard specifies the YYYY-MM-DD format for date literals. While specific database systems like Oracle have their own DATE types, they also support the ANSI standard date literals for compatibility.

2) Which subdivision of SQL is used to insert values in tables?

=>The Data Manipulation Language (DML) subdivision of SQL is used to insert values into tables. DML commands are responsible for all data manipulation within a database, which also includes retrieving, updating, and deleting data. The specific DML command for adding new records is INSERT.
